

Peak efficiency and a long list of durability and convenience features

The right pump should circulate all pool water at least once a day...as efficiently as possible. Greater efficiency means lower utility costs...and the key lies in the heart of the pump's design. The secret is to minimize friction and turbulence. Less friction means greater efficiency. Less turbulence means less noise.

That's why all Pentair pumps feature a proprietary hydraulic design that's been refined over 40 years for superior performance. In fact, they are so efficient they often deliver the required flow and pressure using smaller horsepower motors—which cost less to run. No wonder more than 2 million Pentair pumps have been selected by pool professionals.

Pinnacle offers an unbeatable combination of performance, convenience, and long-term reliability. It features a strong, corrosion-resistant housing, an easy-to-open strainer lid, a large-capacity strainer basket, and the quiet, efficient performance you expect from every Pentair pump.

Standard features include:

- Pump components are molded of thermoplastic for superior strength, durability, and corrosion resistance.
- Transparent strainer pot lid with comfortable handle for quick cleaning inspection and easy access to strainer basket.
- Large strainer basket extends time between cleanings.
- Uni-body pump housing and low-profile molded base provide efficient operation in a sleek design.

Pinnacle®

High Flow Pump

Superior hydraulic design delivers efficient, quiet operation

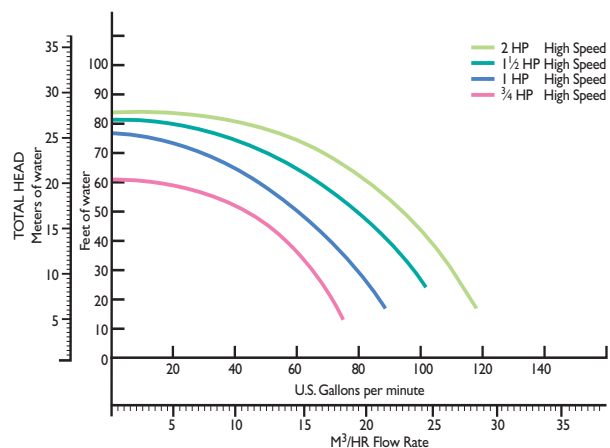

The Pinnacle's hydraulic design effectively reduces friction and turbulence to increase efficiency and minimize noise. It operates so quietly and efficiently, all you'll ever notice is the crystal clarity of the water circulating through your pool's filtration system.

Additional features include:

- Unique diffuser and impeller provide excellent pressure performance across a wide range of flow rates.
- Power end can be removed easily for service or winterizing without disturbing piping or pump support base.
- No tool required for removing thumbscrew drain plugs for draining and winterizing.
- Every Pinnacle pump is performance and pressure tested prior to shipment to ensure our rigorous quality control standards are met.
- One-year limited warranty. See warranty for details.
