SANCTUARY FOR YOUR  
**SENSES**

**Lanark**  
BATHROOM WARE

ASK YOUR CONSULTANT FOR FURTHER DETAILS

## WHAT IS AN **airmassage™** SPA or BATH?

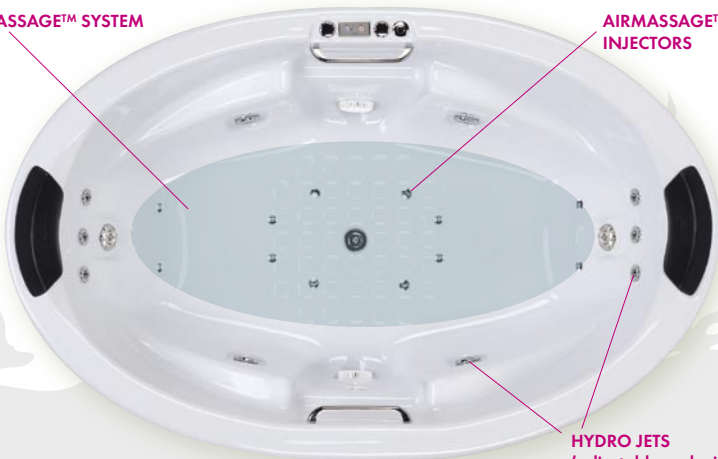

An AIRMASSAGE™ spa or bath contains twelve injectors strategically placed in the base of your spa or bath (see diagram below), which release millions of preheated bubbles into the water, gently massaging your entire body.

An AIRMASSAGE™ spa or bath awakens the senses by creating millions of tiny air bubbles that engulf your body in a sanctuary of tranquillity. It dramatically enhances the ancient pleasures of bathing, transforming your bathroom into a ritualistic retreat.

An AIRMASSAGE™ spa or bath therapeutically combines the elements of water, air and heat to calm nerves, relax muscles, and release tension, allowing the mind to roam free and discover a blissful, meditative state.

# HOW DOES AN AIRMASSAGE™ SYSTEM WORK?

An AIRMASSAGE™ system contains 12 air injectors at the base of your bath or spa. These air injectors release pre-heated air bubbles that have been pumped through a variable speed blower. The divine sensation of the millions of tiny bubbles embracing your body creates a deeply relaxing sense of harmony and well-being. The blower acts in an automatic wave motion increasing and decreasing its speed during the cycle. You can interrupt the cycle and select a particular level of air intensity or allow the blower to move through its cycle automatically.

Each air injector of the AIRMASSAGE™ system is strategically positioned in the bottom of your bath or spa for efficiency and comfort (See diagram page 2). Contrary to most beliefs the bather is not sitting on the jets. When you are in the water, there are three distinct supporting parts: the upper part of the back, the buttocks area and your heels. No jets are installed in these three areas. The jets are generally positioned to surround your buttocks area and your legs. Therefore, the massage is directly on your body where it is needed the most.

The diagram below illustrates how the soothing AIR SPA or BATH works to create a haven for your senses.

# SEVEN REASONS TO UPGRADE YOUR SPA OR BATH TO INCLUDE A LANARK AIRMASSAGE™ SYSTEM

## 1 SAVE WATER & MONEY:

Because the injectors are located at the base of your spa or bath, you don't have to fill the bath up to cover the hydro jets. (See diagram on preceeding page). This means you can save water and money - as less expenditure on water means decreased household expenses. And that helps comply with the State's water saving initiatives.

## 2 SAFE:

The AIRMASSAGE™ system is safe for use by all members of the family. It is for this reason that it is specifically recommended for the elderly (because of its stimulating but non-aggressive action). Therefore, everybody can relax and enjoy the benefits to their health.

## 3 HYGENIC:

Each time the AIRMASSAGE™ system is used, an **automatic cleaning cycle** is activated. This will expell any excess water in the injectors, clean and dry the injector valve system and make sure that all is perfectly sanitized.

## 4 GENTLE ALL ENCOMPASSING:

Take refuge in your spa or bath with the warm, gentle air massage that surrounds you completely, offering a thorough massage to every part of your body. The AIRMASSAGE™ system soothes tensions and tired muscles, restoring balance and harmony to your body.

## 5 TAILORED MESSAGE:

The variable intensity of the AIRMASSAGE™ system allows you to tailor your relaxation experience to best suit your mood. If you seek calmness and tranquility, simply choose the lowest speed and feel your body softly caressed. If you seek vitality and replenishment, treat yourself to a more vigorous massage using the highest speed.

## 6 THERAPEUTIC STRESS RELIEF\*:

The AIRMASSAGE™ system offers the combination of all the therapeutic elements necessary for optimal relaxation. Water creates the effect of weightlessness and relaxes all your muscles and articulations. Heat relaxes your body, making you more receptive to the benefits of the massage. The movement of air activates blood circulation and the lymphatic system. These three components combine to create an incomparable therapeutic effect, relieving your sore and tired muscles. You can truly unwind and enjoy the psychological release that accompanies this soothing experience.

## 7 AROMATHERAPY:

Awaken your senses by adding your own special touch of essential oils, and enjoy without worry. The AIRMASSAGE™ system is equipped with integrated valves within each individual air injector to prevent water or any other additives from reaching the hosing throughout the system. So you can relax and enjoy a massage including these four elements of water, air, heat and that little extra something to help restore and replenish your vital energies.
